DETAILED ACTION

Entry of Amendment

Applicant's amendment filed on December 12, 2002 as paper No. 6 is acknowledged.

Prior Rejections or Objections

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-4 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,836,867 to Speier et al. Speier et al discloses a sealed endoscope coupler with optics (Fig. 7, # 1a) and imaging device (Fig. 7, #3). One end is sealed by brazing a window on the assembly and the camera end has a sealed bulkhead (Fig. 7, #31), thus sealing both the optics and imaging device within the housing. Magnets on the outer ring cooperate with inner magnets to produce a linear movement of the lens frame, changing the position of the imaging device relative to the optics. The imaging device is mounted in the cylindrical body (Fig. 6, # 2) that is interpreted as a frame that is clearly in the optical axis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3739

Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,836,867 to Speier et al in view of U.S. Patent 5,577,991 to Akui et al. Speier et al is discussed above, however, does not disclose lateral or rotational adjustment of the imaging device. Akui et al teaches drive mechanisms for vertical, lateral and rotational adjustment of an imaging device (Col. 10, lines 3-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the eccentricity adjustment of the imaging device as taught by Akui et al in the invention of May et al to provide a mechanical alternative to the electronic adjustment for image centering on the imaging device.
